

Hardware validity: $VALID = NOT [BCD3 \text{ AND } (BCD2 \text{ OR } BCD1)]$

ON = +5 V OFF = 10 kOhm pull-down

The schematic diagram illustrates the power supply network for the ADXL345. It includes four 100nF capacitors (C7, C8, C9, C10) connected to +5V and GND, labeled u1, u2, u3, and u4 respectively. It also shows a 10uF capacitor (C11) connected to +5V and GND, and two PWR_FLAG pins connected to GND.

[illegible]

D2-D7 are the UNO Q's 5 V-tolerant STM32 header inputs. Never connect this circuit to the 1.8 V MPU GPIO.
